

Water Reservoir Maintenance

Cleaning

- Wash reservoir and all components with a mild detergent (we recommend a good biodegradable soap) and hot water. Prop open and hang to Air Dry.
- To refresh your Reservoir, add two or three teaspoons of baking soda to a full reservoir of water and leave to soak overnight. Then rinse well.
- To sanitize your reservoir, add two or three teaspoons of bleach to a full Reservoir of water and leave to soak overnight. Then Rinse well.

Tips

- Refresh the Reservoir before using the first time.
- The Tapered Thread and Screw Cap need to be snug to prevent water leakage.
- Test both the Tapered Thread and Screw Cap seals prior to placing in your backpack.
- Close the Pop-Up Flow Release Valve when not in use to prevent water leakage.
- Wash and Air Dry thoroughly prior to storing your reservoir.
